

The tablericons package (3.44a) – 2026/10/26

Cédric Pierquet

<https://tabler.io/icons> (Source version 3.44)

<https://github.com/cpierquet/latex-packages/tree/main/tablericons> (L^AT_EX package)

cpierquet – at – outlook . fr

This package provides L^AT_EX support for the tabler Icons project (<https://github.com/tabler/tabler-icons>).

A set of 6146 free MIT-licensed high-quality SVG/PDF icons for you to use in your web projects. Each icon is designed on a 24x24 grid and a 2px stroke.

To use tablericons in your document, include the package with `\usepackage{tablericons}`.

An icon can be accessed using the icon name. A list of all included icons with their respective *page* can be found at the end of this document.

The individual icons are provided as pages of a PDF and are ultimately loaded using the `\includegraphics` command from the `graphicx` package.

Thanks to priiduonu for the tip with stroke color !

1 Example

```
...
\usepackage{tablericons}
...
\begin{document}
...
Inline\tablericon{alarm-snooze}version,
and colored\textcolor{red}{\tablericon{alarm-snooze}}
...
\end{document}
```

Result: Inline🕒version, and colored🕒

2 Usage

2.1 Generic macro

`\tablericon[filled=TF,height=..., (d)strut=...]<includegraphics options>{name}`

The boolean `[filled]` activate filled version of icon (if available). And key `[height=...]` can be:

- `dauto` (by default): inline insertion with height/depth;
- `auto`: inline insertion with height/nodepth;
- `a length`: normal insertion with fixed height;
- `manuel height/depth`: normal insertion with fixed height/depth.

The keys `[(d)strut=...]` can be used to set the *reference* box for dimension calculations.

By default, icons are given with a small border, so the given height is the height of the *full* box, not the hight of the icons.

Example: Inline  version or inline  version

2.2 Examples

```
%normal version: inline with automatic height/depth (from qX characters)
\tablericon[height=dauto]{alarm-snooze} %or \tablericon{alarm-snooze}
```

q⌚X

```
%normal version: inline with automatic height/depth (from specified characters)
(q\tablericon[height=dauto,dstrut=(qB)]{alarm-snooze}B)
```

(q⌚B)

```
%normal version: inline with automatic height (from X character) default version
\tablericon[height=auto]{alarm-snooze}
```

X⌚X

```
%normal version: inline with manual height/depth
\tablericon[height={0.8em/-0.4em}]{alarm-snooze}
```

qb⌚Xz

```
%fixed height
\tablericon[height=2in]{alarm-snooze}
```

2.3 Used packages

graphicx is loaded and used by the package (the key handling relies on expl3, which is part of the L^AT_EX kernel since October 2020).

2.4 Bugs

For bug reports and feature requests, report on the GitHub repository <https://github.com/cpierquet/latex-packages/issues>.

3 List of icons

Icons are colored in **violet**.

3.1 Outline version (4985 icons)

The PDF file is `tablericons-outline-all.pdf`
